I dare say you will be coming here
for the meeting at Newhaven
Nov 4. If you come Early enough
we can lunch in my rooms or
in Hall as you like best.
Herrn ~~Hoefer & H~~ Fleeg & Kluter
Opticians, Homburg-v-d-Höhe
Germany are the best for thick
Sections - Voigt + Hochgesang,
Göttingen, for thin rock sections.
Thank you for telling me
about the Earls Court Exh^n.
With very kind regards to Mrs
Wilkins & yourself I remain
Very sincerely yours
G. T. Lewis

DSI

887/907 Lewis

Dear Professor Wilkins

I return plate on which I
made following observations
Convergent light
Nicols ×: pale sharp centre
Plate analyser Coloured rings to golden
Right purple & then blue
Plate analyser
Left sky blue, deep blue
purple & so forward

Turning polariser Right is
same as turning analyser Left
& has same effect
parallel light gives same colours as centre.
using 2nd plate find arms
spirals when a right-handed plate

is used. Hence left-handed
piece of
being a mirror plate; lens
& two plate window glass
and Davy's spirit by
use of your plate alone
they curl to right which
is that contrary to cha-
racter of plate. Hence again
left-handed.

I believe Lewis Wright
& Lummel both give the
rules in their books on
light. I gave them under
Quails in my book which
I hope you will attend to.

I offer you my most hearty
Congratulations on your
golden wedding, & hope
there are many happy
years still to come for
you & Mrs Walthew

I saw the picture - a very
good likeness in Mr Woodward's
room when last in town.

LEWIS, William James
